

KEEP IT CLEAN

To enhance boat performance, it's critical to keep marine growth at bay. PropSpeed makes a "Low VOC," environmentally friendly coating that bonds to metal surfaces below the waterline, including props, shafts, struts, trim tabs and through-hull fittings. PropSpeed can be applied by "do-it" yourselfers or professionals. Visit their website at www.propspeedusa.com or call 877-987-7333 for more information.
